Rethink What Your *Skin Drinks*

We know you've heard this many times – "Drink more water!" Yet, 99% of people don't heed this advice. Maybe if water was more expensive, people would pay more attention to consume enough of it on a daily basis. We are living in a dehydrating world of carbonated beverages, caffeine, alcohol and synthetic ingredients in our skincare.

Many of us begin our day or seek a mid day perk with a caffeinated beverage. Did you know for every dehydrating beverage we drink, it takes 4 cups of H2O to replenish the water loss from our body and skin? Water fuels basic cellular functions like cell turnover & is full of natural minerals necessary for healthy skin.

It is of equal importance to be aware that what goes on your skin; goes in your skin! Synthetic ingredients, though widely used are toxic to the skin and body. To give your skin the best advantage you have to be willing to search out natural products. Are you equipped with trioSkincare's "ten most wanted" list?

So our question is, are you ready to drink more water and go non-toxic? Call trioSkincare today for the ingredient no-no's and let your skin drink responsibly!

See your skin in a new *Light*

BBL Broadband *Light* Series

Sun damage begins at a very young age. UV photography as seen in this 17 year old above allows us to see sun damage below the surface of the skin. BBL treatments quickly eliminate redness and skin discolorations above and below the surface of the skin. BBL treatments also stimulate your skin cells to generate new collagen restoring your skin's natural beauty! Call today for
